

Guidelines For Estimating Crop Production Costs - 2008

Date: January 2008

These projected crop costs have been prepared to assist in developing your own production costs. Also available, is an Excel spreadsheet that can be downloaded from the Manitoba Agriculture, Food and Rural Initiatives website.

The following budgets are estimates of the cost of producing several different crops. General departmental recommendations are assumed in using fertilizers and chemical inputs. The figures provide an economic evaluation of the crops and estimated yields required to cover all the costs including labour and investment. Management has not been accounted for in these budgets.

These budgets may be adjusted by putting in your own figures. As a producer you are encouraged to calculate your own costs of production for various crops. On each farm, costs and yields differ due to soil type, climatic conditions and agronomic practices.

Disclaimer: This budget is only a guide and is not intended as an in depth study of the cost of production of this industry. Interpretation and utilization of this information is the responsibility of the user. If you require assistance with developing your individual budget, please contact your local Manitoba Agriculture, Food and Rural Initiatives office.

Crop Production Costs 2008 Guidelines (Dollars Per Acre)

	Wheat	Durum Wheat	Winter Wheat	Fall Rye	Malt Barley	Feed Barley
A. Operating Costs

Hemp Fiber	80	\$36.00	30	\$12.30	30	\$7.20	0	\$0.00	\$55.50

The nitrogen price used in the above assumptions is an average of the following sources: anhydrous, liquid and granular fertilizers. The higher price for nitrogen * only applies to winter wheat and fall rye, because it is generally spring applied.

The fertilizer recommendation will vary depending on the soil type, climate and crop rotation. The department recommends that soil test sampling and analysis be conducted each year to produce a better baseline for fertility. It costs \$0.40 to \$0.80/acre for custom sampling and analysis.

Hemp Fiber	\$625.00	\$25.00	\$225.00	\$22.50	\$9.00	\$3.77	\$17.25

Storage costs were based on an estimated yield of 30 bu/acre for most grain crops; 60 bu/acre for corn; soybean and navy bean storage was based on a separate budget.

Other Assumptions

Fuel Costs:

Includes fuel used for field work, trucking inputs and products out.

Machinery Operating Costs:

Includes costs for maintenance, repairs, licenses and insurance.

Crop Insurance: (2007 rates. New rates for 2008 are not included.)

Risk Area #6 at the 70% coverage on a "B" soil zone and additional hail insurance at \$100/acre coverage for spring wheat, durum wheat, winter wheat, fall rye, barley, canary seed, canola, flax, oats and mustard.

Risk Area #12 at the 70% coverage on a "B" soil zone and additional hail insurance at \$100/acre coverage for sunflowers, peas, lentils, buckwheat, corn, soybeans, navybeans and hemp.

Other Costs:

Includes overhead expenses - hydro, telephone, accounting, buildings, supplies and insurance, etc.

Land Taxes:

The average for the province was based on land tax assessment and mill rates of a sample of municipalities growing crops less provincial tax rebate.

Drying Costs:

Budget allocates costs only for corn, sunflowers and hemp. However, drying costs may be incurred in some years for the other crops.

Interest On Operating:

Interest charges on operating costs are calculated at 6.5% for six months.

Land Investment Cost:

Land values are based on average land sale values in Manitoba. Budget assumed 4% return on land investment

Depreciation:

Assumed 10% on machinery, no salvage value.

Investment Cost:

Assumed 4% opportunity cost on the machinery.

Storage Cost:

Assumed a 5% depreciation cost and 4% investment cost.

Farm storage requirements were assumed to be 30 bushels/acre costing \$1.75/bushel for 50% of the storage and \$2.00/bushel for 50% aerated storage.

Storage requirements for corn were calculated at 60 bushels/acre.

Example - WheatNon-Aeration Bins (50%)

Depreciation:	$\frac{\$52.50 - \$5.25}{20 \text{ years}}$	=	\$2.36
Investment:	$\frac{\$52.50 + \$5.25}{2} \times 4\%$	=	\$1.15
	Sub-Total	=	\$3.51 x 50% = \$1.76

Aeration Bins (50%)

Depreciation:	$\frac{\$60.00 - \$6.00}{20 \text{ years}}$	=	\$2.70
Investment:	$\frac{\$60.00 + \$6.00}{2} \times 4\%$	=	\$1.32
	Sub-Total	=	\$4.02 x 50% = \$2.01

Total **\$3.77**
