Unit 5: Energy

Lesson 9: Wind Energy Presentation

Directions: Go to the following website: http://www.agmrc.org. Click on the Commodities and Products, energy, energy and wind energy. Use information for the following.

Scenario: You are in the process of putting up a wind farm on different parts of your property. Since it has become known, there have been numerous complaints and protests. You have decided to hold a meeting at the local town hall to give a presentation on your upcoming wind farm. The presentation should include the following information:

- What a wind farm is
- Number of wind turbines that you will be putting up
- How much energy you will be producing from each turbine
- How the local economy will be benefiting from the wind farm
- Cost
- Why it is important to support it

Remember, this is going to be a presentation to persuade people to support your farm. In addition, you need to educate them on why this new technology is needed in your area.
